Norman L Carreck  
Science Director

5/1/15.

Dear Dr Marek Petřivalský,

Your paper 13102SS "**Antimicrobial peptides: a key component of honey bee innate immunity.**" is accepted for publication in the *Journal of Apicultural Research* and now in the publication process. It can be cited as "*in press*".

Finally, may I also draw your attention to the journal's Open Access option? Open Access means that on payment of an up-front fee by the authors, articles are made available online free of charge to anybody. Authors retain copyright of their article, and will then be able to grant anybody the right to disseminate and reproduce it, provided that it is cited correctly and that no errors are introduced. The cost is £650 (€950 US\$1500) for full papers and £350 (€500 US\$800) for notes and comments. Increasingly, grant awarding bodies are supporting, or even requiring, publication of research that they have funded under Open Access arrangements. Open Access is of course merely an additional option, and normal publication in the journal remains free of page charges.

I look forward to hearing from you.

Yours sincerely,

Silke Stach,

Assistant Editor,  
*Journal of Apicultural Research.*
